

# SWIMMING POOL TREATMENT

With Clear Choice Swimming Pool Treatment, you cut out all of your opening and closing chemicals. If you are taking care of your water the way traditionalists say to, you should be using a metal sequestering agent, algaecide and chlorine when you open your pool and when you close it. Clear Choice Pool Treatment is completely compatible with saltwater chlorinator pools.

During the season if you use chemicals only, it is recommended that you maintain a level of chlorine of 1.5-3ppm (parts per million). By adding our Clear Choice Swimming Pool Treatment with its special blend of enzymes, bio-oxidizers and surfactants to your pool, you only need to maintain a level of .5ppm chlorine. About the same amount of chlorine in city tap water.

Aside from the cost savings, you will now be swimming in water that is as close to nature as we can get it in a swimming pool. Your pool walls, equipment, skin, eyes, hair, and bathing suit will all thank you for the

- Dramatically reduce the amount of chlorine you use by 50 - 80%.
- Pumps will not get the usual residue build up which shortens their life.
- Skin will feel soft, not dried out and tight, when you leave the water.
- You can swim with your eyes open under the water and it will not hurt.
- Your hair will stay soft, not dry and frizzy or turn green.
- Bathing suits will last longer.

## HOW DO YOU START?

- 1 When you open your pool or start the treatment for the first time you add 60 mL (2 oz) per 38,000 litres of water the first and second week.
- 2 Then, skip week three and add 30 mL (1 oz) per 38,000 litres every other week during the season, (week 4, 6, 8, etc).
- 3 As you get ready to close your pool, you add 60 mL (2 oz) per 38,000 litres the last two weeks then close the pool.

## REMEMBER...

Always mix Clear Choice Swimming Pool Treatment with 4 litres of water and pour evenly around the pool perimeter.

Maintain free chlorine level of 0.5ppm. You may have to adjust your chlorine level slightly higher if necessary to maintain water quality. Keep the pH and total alkalinity adjusted to traditional levels.

In a normal year, 16 x 30 mL (1 oz) doses will need to be added. So for a 38,000 litre pool you need 1 bottle of Clear Choice Swimming Pool Treatment a year, a 70,000 litre pool would need 2 bottles.

Keep your swimming pool floor free of debris by vacuuming regularly throughout the season.

Reduce the amount of chlorine in your swimming pool slowly, especially if you are a first time user of Clear Choice.

If using standard chlorine please maintain 30-50 ppm of stabiliser (cyanuric acid).

**Our enzymes are safe for your family & pets, your wallet and the environment. You can backwash your filter or drain the water right onto the lawn or other vegetation without any harm.**
